

A close-up photograph of a woman with a joyful expression, smiling broadly and showing her teeth. She is wearing a black halter-neck top. Her right hand is raised in a fist, positioned in the foreground and slightly out of focus. The background is a bright, blurred outdoor setting, possibly a beach or a sunny outdoor area. The overall mood is energetic and positive.

KICK

THEM OUT!

EYECRYL™ PHAKIC

PREMIUM CORRECTION of MYOPIA, HYPEROPIA and ASTIGMATISM

WOW!

After undergoing EYECRYL Phakic procedure, the word that may describe best your feeling would be "WOW"!

Your vision will be breathtaking.

A hand in a dark sleeve holds a small, clear contact lens against a vibrant blue background. The hand is positioned on the left side of the frame, with the thumb and index finger gently holding the lens.

A revolution for your vision

You are a young and dynamic person that enjoys a stimulating life.

Why frame your vision with glasses and/or contact lenses?

Get rid of them!

Kick them out of your life to make the most out of it.

With EYECRYL Phakic premium treatment for the correction of the near-sightedness, far-sightedness and astigmatism you will enjoy a crisp and brilliant vision.

Explore

the unexplored

Unleash all your potential, explore the unexplored.
See the world the way your eyes can with EYECRYL Phakic IOL.

Crisp, transparent and bright.
Experience sharp vision in all conditions, correcting your myopia,
hyperopia and/or astigmatism.

Myopia, Hyperopia and Astigmatism

Myopia or near-sightedness (light focuses in front of, instead of on, the retina), Hyperopia or Far-sightedness (light focused behind, instead of on, the retina) and Astigmatism (light does not focus evenly on the retina) are most common vision errors. EYECRYL Phakic IOL corrects them all.

Enjoy a vision free of glasses and/or contact lenses with EYECRYL Phakic.

*EYECRYL Phakic IOL is
power, flexibility and resilience*

POWER

EYECRYL Phakic IOL

EYECRYL Phakic IOL has been developed with the most advanced technology by Biotech Healthcare, a global ophthalmic company, based in Luzern, Switzerland. It has been design to correct a wide dioptric range of myopia, hyperopia and astigmatism, providing at the same time protection agaisnt ultraviolet radiation.

Besides its high biocompatibility, EYECRYL Phakic has the power of flexibility and resilience which are key.

Wide range

Corrects low to high myopia, hyperopia and a wide range of astigmatism

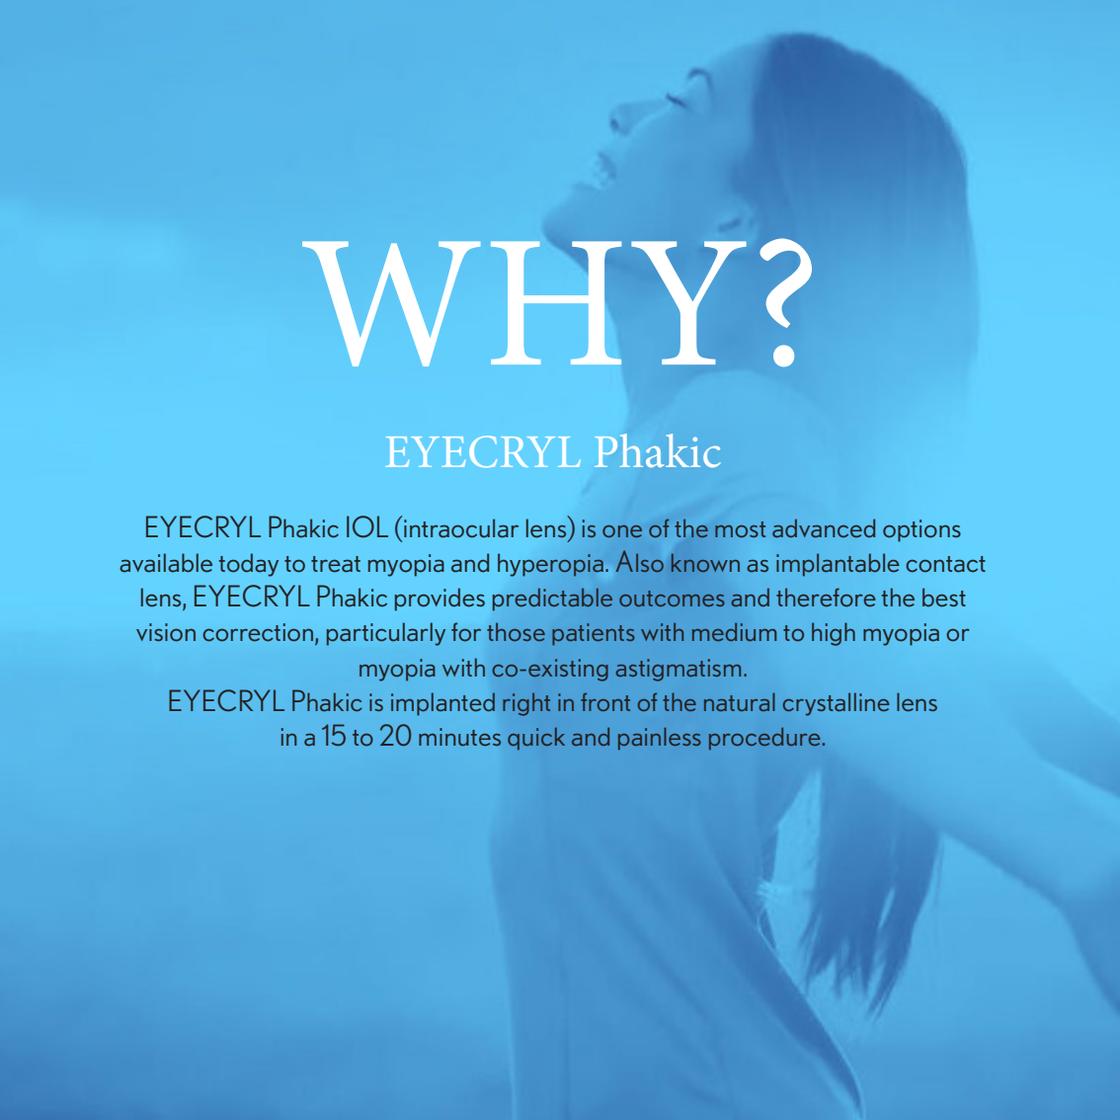

UV filter

Protects your eyes from ultraviolet radiation

High biocompatibility

Soft and flexible hydrophilic acrylic material for highest biocompatibility

WHY?

EYECRYL Phakic

EYECRYL Phakic IOL (intraocular lens) is one of the most advanced options available today to treat myopia and hyperopia. Also known as implantable contact lens, EYECRYL Phakic provides predictable outcomes and therefore the best vision correction, particularly for those patients with medium to high myopia or myopia with co-existing astigmatism.

EYECRYL Phakic is implanted right in front of the natural crystalline lens in a 15 to 20 minutes quick and painless procedure.

key benefits

Reversible treatment

for myopia, hyperopia and astigmatism

The only surgical treatment for the correction of myopia, hyperopia and astigmatism that **keeps your cornea unaltered**

A premium treatment now **available to all**

Dry Eye Syndrome Free

treatment. LASIK and PRK may cause dry eye syndrome*

Excellent crisp and sharp vision

Better contrast sensitivity, sharpness and clarity at nighttime with 97,6% patient satisfaction*

*

Quick & Painless

A simple procedure

The procedure starts with some drops to numb your eyes, followed by a quick and painless standard surgery which will end, about 20 minutes later, with you walking out of the outpatient room.

Are you
apprehensive ?

EYECRYL Phakic is an IntraOcular Lens. The procedure means the lens is implanted just behind the Iris. It is done through a tiny incision. You might feel apprehensive about this, but actually it is the less invasive and gentle surgical procedure to correct myopia, hyperopia and astigmatism of all available options. Other surgical options, like LASIK or PRK remove corneal tissue permanently.

Eye drops

In the outpatient room, they will give you eye drops to numb your eyes.

Go home

After that your ophthalmologist will put some drops and the procedure is over. The whole process lasts for 15 to 20 minutes.

20 to 30 minutes painless treatment

Few minutes after that, your ophthalmologist will perform the surgery. A tiny incision will be made to allow the implantation of EYECRYL Phakic IOL.

Quick recovery

Your eyes will be checked post-operatively and you then will be able to go home to recover. Very soon after, your vision will, typically, be clear and crisp. Your new vision will be breathtaking.

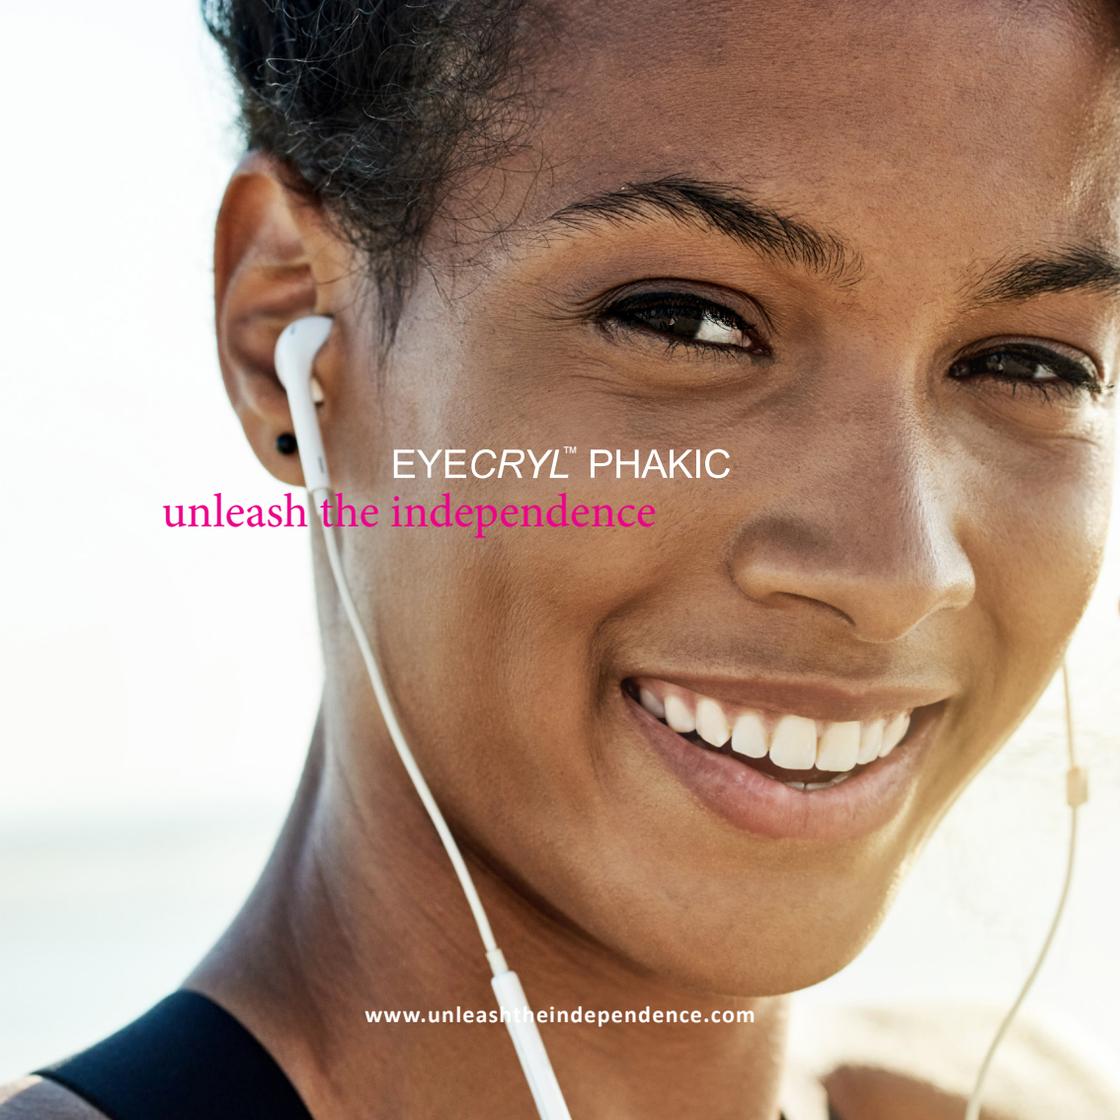

A NEW LIFE

All the benefits of your new life with EYECRYL Phakic

Practicing any sport can often be a necessity to feel good with yourself.
Just run, swim, row, cycle or jump out with a parachute!
